Note that in updating the search, the following reference to Sargent was found that appears to read on the independent claims. A rejection has been applied below but has not been made Final.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,6,11 and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Sargent.

Figures 1-3 show structure as claimed, including a housing 8, a pawl 8a fixed thereto, a recliner rod 9, and a cam 10 that forces the rod into engagement with the pawl.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-4,7-9,12-14, and 17-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sargent in view of either Ferreira, Detloff et al or Rogala.

In regard to claims 2,7,12 and 17, to have utilized more than one tooth to form the pawl of Sargent, for the purpose of increasing the engagement between the

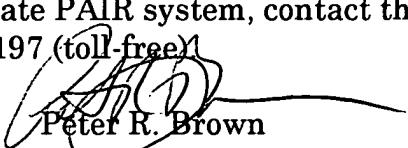

rod and housing, would have been an obvious modification to one with ordinary skill in the art, as such is old and well known in the art as evidenced by the prior art of record.

Regarding claims 3,4,8,9,13,14,18 and 19, to have provided the mechanism of Sargent with a biasing means, for forcing engagement between the pawl and rod, would have been well within the level of skill in the art, as such is shown to be conventional by Ferreira (fig. 2), Detloff et al (fig. 5) and Rogala (fig. 6).

Claims 5,10,15, and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
